

Transportation Coordinator's Automated Information for Movement System II (TC-AIMS II)

SYSTEM DESCRIPTION

Transportation Coordinators' Automated Information for Movement System II (TC-AIMS II) provides detailed equipment sourcing to Joint Force Requirements Generator II (JFRG II). TC-AIMS II passes Unit Deployment List (UDL) and Roster data back to JFRG II. The data is then rolled up to a level four Time-Phased Force and Deployment Data (TPFDD)/Unit Line Numbers (ULNs) in JFRG II and exported back to Joint Operation Planning and Execution System (JOPES). The interface files that are passed between JFRG II and TC-AIMS II are compressed and contain a series of tab-delimited ASCII text files without encryption.

INTEROPERABILITY CERTIFICATION STATUS

Please refer to the [Joint GCCS Interoperability Status Table](#)
